BACHELOR OF SCIENCE in Air Traffic Control

About the Program

As an Air Traffic Controller, you make the call. A controller directs a plane to ensure it is safe in crucial situations on and above land. This course focuses on skills, knowledge, resourcefulness, and decision-making ability needed to successfully guide airplanes through all stages of a flight. Students get their hands on equipment used in these situations. Career advancement within the airline industry is also addressed. If you want to be an Air Traffic Controller, this is the program that will guide you there.

What You Will Learn

The program has been designed to match the International Civil Aviation Organization's standards of aviation education with the aim of producing highly qualified graduates that meet the demands of the air traffic control industry.

The curriculum consists of effective management and aviation leadership training together with lectures in the fundamentals of business. Since English is the main language for aviation communication, students undergo intensive English language training with emphasis on internationalized aeronautical phraseology.

Through rigorous training students are prepared to make accurate decisions within very limited time spans. Courses are delivered by our highly experienced air traffic control specialists and are hosted in our state-of-the-art control tower simulation room. Numerous field trips to airports and aviation institutes enable students to study and observe real-world air traffic management operations.

During the final year of the program, students attend internships at various airports and aviation centers for acquiring crucial hands-on experience.

Career Opportunities

- Air Traffic Control Officer
- Operations Support Officer stationed at airport-based airline transport companies
- Officials at the Ministries of Transport
- Operations Officer for airline companies
- Air Traffic Control Officer stationed at off shore oil rigs
- Private sector operators
